Israel at Milipol Paris 2015

Protecting our way of life

Protection of transportation systems, utility distribution infrastructure and similar strategic assets has become a top priority in the face of the domestic, cross-border and international terror threats that are on the rise everywhere. Israeli HLS technologies, developed to safeguard Israel's national security, are among the most advanced in the world and have been proven in many real-life situations. They are the solutions of choice for many nations that are increasing their investments in homeland security.

Cities, with high population densities and their concentrations of strategic assets, are a special focus of many security agencies. Israeli systems support the extensive efforts being made to secure modern cities by integrating existing surveillance capabilities with sophisticated situational awareness mechanisms and the command and control centers that empower "safe city" initiatives. Israeli companies have particular strengths in video surveillance systems and analysis, personal and vehicle protection and intelligence gathering. These technologies are typically integrated with existing law enforcement, traffic management, and general security procedures in urban domains. Ensuring business and organizational continuity requires preparing for emergencies. This includes emergency management procedures, robust communications systems and more, all available from Israeli providers. Physical threats can be minimized and even neutralized via Israeli armored vehicles and related hardware, including non-lethal and less-lethal systems. Batterypack to riot vehicle, personnel protection to signal intelligence, there's an Israeli solution that meets your needs.

The Israel Export &
International Cooperation Institute

Inspired by innovation

The Israel Export & International Cooperation Institute

The Israel Export & International Cooperation Institute, supported by member firms, private-sector bodies and the government of Israel, advances business relationships between Israeli exporters and overseas businesses and organizations. By providing a wide range of export-oriented services to Israeli companies and complementary services to the international business community, the Institute helps build successful joint ventures, strategic alliances and trade partnerships around the world.

Aerospace, Defense and HLS Department – "Your Gateway to Israel's HLS Industry"

The IEIC's Aerospace, Defense and HLS Department represents over 400 exporting companies in the homeland security arena. Israeli defense and security companies offer technologically advanced, field-proven products and solutions that are among the most innovative anywhere. They are successfully partnering with key world players to ensure public safety, protecting air and sea ports, borders, government installations, financial institutions, recreation centers, public venues and more. The Department works with foreign government ministries and their agencies, as well as with industry bodies, to promote private-industry joint ventures and international partnerships.

Solution at a Glance

Bullet Plate sees great potential in cooperating with BAE SYSTEMS We see the future with BAE Systems in various aspects: as sub-contractors, in sharing technologies or joint ventures.

We see great importance in establishing a business relationship with BAE systems.

Technologies/Products/Services

Flexibility, Efficiency, Attractive prices and minimum weight are the principles which give our products distinct advantages over any other producer of ballistic defense elements.

Our Production capability for personal armor is between 500 to 1000 ballistic plates per day. Production technology advantages relate to maximal usage of materials, quality of hard armor and mixed ballistic fabrics. Production processes yield savings in manpower, time and energy.

The materials that are being use in BulletPlate are different types of steel, aluminum, ceramics, Kevlar, polyethylene, glues and plastic materials.

COMMUNITAKE

CommuniTake Technologies

www.communitake.com

Solution at a Glance

CommuniTake Technologies crafts security, management and care solutions since 2009 to provide people and businesses with better mobile use. The INTACTPHONE solution provides holistic, multilayered defense – hardened device, encrypted communications, central mobility governance, and remote control – to prevent tampering of mobile devices and to enable safe communications. It delivers sustainable secure communications, defends against advanced eavesdropping, safeguards on-device data, and fulfills enterprise mobility directives for both BYOD and COPE devices. The INTACTPHONE is the world's only solution to secure the entire communications environment, uniquely combining best-of-breed security, central mobility management, and hands-on control.

Technologies/Products/Services

INTACTPHONE is a secure communication and hardened smartphone environment, providing organizations with highly secure mobile communications. It defends against advanced eavesdropping and data theft threats via modular three-tier security for both BYOD and COPE devices.

Target Sectors and Positions

Government Agencies, Military, CTOs of commercial companies with sensitive info-banking, Oil & Gas, and legal Systems

Target Countries

France, Germany, Poland, Italy, UK, Belgium, Spain

Other Countries

US, Brazil, India

Goal

Generating leads and finding distributors

Solution at a Glance

Elsight develops video transmission solutions from portable wearable units, moving vehicles or critical infrastructures to control center. Elsieht won all relevant Israeli tenders for national security, police and SWAT for real-time video transmission with our unique solutions. We use single or multiple 3G/4G links to provide hi-quality video, voice, data, sensors and GPS location to control center for different applications and provide end-to-end solution (product and C&C).

Technologies/Products/Services

Multichannel aggregates several 3G/4G links in order to achieve a wider bandwidth, secured, reliable and hi-quality video stream. It splits the H.264 encoded video stream to pieces, each sent via another link.

Rider-M is a ruggedized 4/8 cameras encoder suitable for mounting on vehicles/buses, with 3G/4G transmission, Wi-Fi and GPS location. Automatically offload hi-quality recordings to server via Wi-Fi.

Tactical MA2016 - Wearable tactical light-weight unit, with real-time video-audio transmission over 3G/4G, Wi-Fi, GPS and panic button.

Commander360 - central-based, modular video management system with video distribution, central recording, analysis, alarms handling, and video dispatch to passive remote clients.

Target Sectors and Positions

System integrators working with Security/HLS domains: police, military & intelligent, airports, emergency agencies and private security organizations. Fleet Management vendors, major logistics companies (trucks, cash-in transit, etc.) Public transportations companies and integrators.

Target Countries

France, Germany, Poland, Italy, UK, Belgium, Spain, Netherlands

Other Countries

Switzerland, Austria, Japan, Mexico, Portugal, East Europe, West Africa

Goal

Getting new leads and enhance our exposure to military/government/para-military entities, including SIS

Solution at a Glance

Wintego develops a suite of tactical and strategic cyber solutions for extracting valuable data intelligence from targets' devices and web accounts. Using several techniques to overcome the encryptions implemented by many web accounts and apps on a variety of devices, our cyber Data Extractor (DEX) engine extracts your targets' secured data - emails, chats, social-network profiles, contacts, calendars, files, photos, web-browsing, locations, and more. To obtain this data, many law-enforcement and intelligence organizations around the world are using Wintego solutions in a variety of scenarios.

Technologies/Products/Services

Implementing the cyber DEX engine, Wintego solutions can connect to any type of IP network carrying your targets' data traffic.

WINT - an advanced all-in-one tactical system that extracts secured target data over Wi-Fi.

DEX In-Line - a strategic solution for extracting secured target data from IP communication links of large complexes or ISP networks.

Target Sectors and Positions

1. Law enforcement agencies (police, secret service, federal police, federal security service, secret service, military police and such) + military intelligence.
2. Local companies that have existing relationships with such government agencies in their country and sell such solutions to them.

Target Countries

Worldwide

Other Countries

Worldwide

Goal

Meet new potential customers and resellers/distributors to whom we can offer our solutions.
